## ***Introduction***

The Section 515 of the 2006 Amendments to the Older Americans Act requires that the Senior Community Service Employment Program (SCSEP) conduct an analysis of the levels of participation of and the outcomes achieved by minority individuals for each grantee by service area and in the aggregate. The report to Congress must also contain a description of grantees' efforts to serve minority individuals and must include:

- (A) An assessment of individual grantees based on criteria established by DOL;
- (B) An analysis of whether any changes in grantees have affected participation rates of minority individuals;
- (C) Information on factors affecting participation rates among minority individuals; and
- (D) Recommendations for increasing participation of minority individuals in the program.

This preliminary analysis looks at the participation levels of and outcomes achieved by minorities in PY 2009. It uses the same approach and analyses employed in the reports for PY 2006, PY 2007, and PY 2008. Part I of Volume I provides a comparison of the participation of minority groups to their proportion in the population. Part II of Volume I examines the employment outcomes (Common Measures Entered Employment, Retention, and Average Earnings) of minorities in SCSEP compared to non-minorities. The detailed tables for all of the analyses are contained in Volume II.

## ***Summary of Findings***

### **SCSEP Participation**

As was true for the PY 2008 Minority Report, this analysis of SCSEP minority participation compared to the incidence of minorities in the population is based on custom tables from the US Census Bureau utilizing the full American Community Survey (ACS) data set from 2007 through 2009.

Using these more accurate population estimates, the following are the findings of this analysis:

- At the nationwide level, SCSEP over-serves minorities overall, Blacks, American Indians, and Pacific Islanders while under-serving Hispanics and Asians.
- 22 grantees, 13 state grantees and 9 national grantees, significantly under-serve Hispanics.
- 19 grantees, 10 state grantees and 9 national grantees, significantly under-serve Asians.

These trends are similar to those found in PY 2008. While the number of grantees under-serving Hispanics increased slightly from PY 2008, in several cases the size of the disparities diminished due to the lower population estimates for Hispanics in the three-year average for 2007-2009. The number of grantees under-serving Asians declined from PY 2008.

## **SCSEP Outcomes**

In PY2009, there were significant disparities between particular racial groups and Whites and between minorities as a whole compared to non-minorities. The primary disparities are in the entered employment rates. The results are similar to those in PY 2008.

Examining disparities between Whites and individual minority groups provides a detailed look at racial disparity. Nationwide, Whites entered employment significantly more often than all other racial groups. Among national grantees as a group, Whites entered employment more often than Blacks and American Indians. Among state grantees as a group, Whites entered employment more often than Blacks, Asians, and Pacific Islanders. In addition, seven individual grantees had racial disparities in entered employment, most involving Blacks. In terms of disparities due to ethnicity, Hispanics entered employment significantly more often than non-Hispanics nationwide and among national grantees. This result for Hispanics is similar to prior years.

For employment retention and average earnings, analyses at the nationwide, national grantee, and state grantee levels showed no disparities for any racial groups. Hispanics had significantly higher employment retention among state grantees only. Hispanics also had significantly higher average earnings than non-Hispanics nationwide and among both national grantees and state grantees. Only three individual grantees had disparities for employment retention, and three had disparities for average earnings; all six instances involved Blacks.

The final analysis for each of the employment measures compares all minorities against all non-minorities. Nationwide and among national and state grantees, minorities overall entered employment less often than non-minorities. Six individual grantees also had disparities between minorities and non-minorities. For employment retention, there was a significant difference between minorities and non-minorities for national grantees only. For average earnings, there were no significant differences between minorities and non-minorities either nationwide or among all state grantees or all national grantees. Only one individual grantee had a significant difference between minorities and non-minorities for employment retention; three individual grantees had significant differences between minorities and non-minorities for average earnings.

### ***Part I: Participation***

#### **Data Sources**

There are two major data sources for the analyses of minority participation in SCSEP. One set of data is from the SCSEP Performance and Results QPR System (SPARQ) for PY 2009. The other set of data for the incidence of minority groups in the United States population is the 2007-2009 American Community Survey (ACS). Custom tables were developed for this report by the US Census Bureau using the full ACS data set. These custom ACS data sets, first used for the PY 2008 Minority Report, are now the standard source of population data for these analyses.

The ACS was used to determine the number of individuals in each state over 55 years of age and at or below 125% of poverty in various minority categories. This defines the population of minority individuals whom the program could serve. The participation analysis looked at 70 of the 74 SCSEP grantees. The three overseas territories, American Samoa, Guam, and the Northern Marianas, as well as the Virgin Islands, are not included in this analysis because accurate and recent population data for low income elderly are not available for those jurisdictions.

Both data sources were used to calculate the percentage of each minority group: Black, American Indian, Asian, Pacific Islander, and Hispanic. Hispanic was calculated by whether an individual was identified as Hispanic versus not Hispanic regardless of any racial category identified. The racial categories were calculated by placing individuals in a category if they identified solely with that racial category or if they identified with that racial category and any other racial category. This approach results in some individuals being counted in more than one racial category. However, the percentage of individuals in the ACS who identify themselves as having more than one racial category is very small, less than 2.2 percent among all ages, and only 5.3 percent of all those 55 and over and at or below 125% poverty. A minority overall variable was created for both data sets by counting any individual who chose any racial minority category and/or designated himself or herself as Hispanic.

## **Methodology**

The data from the ACS custom tables and from SPARQ were compared in order to create estimates for each minority group for the following categories of SCSEP grantees:

- The nationwide SCSEP program as a whole
- State grantees and national grantees, individually and as groups
- For each national grantee, each state in which that national grantee operates

For each of these analysis groups, the incidence in the population of various minority categories was compared with the proportion of minority SCSEP participants served. Where the proportion of those served in SCSEP in a particular minority category was less than the incidence in the population, a statistical significance test (a z-test for proportions) was performed to determine whether the difference was likely to have occurred by chance. Statistical significance was set at the .05 level, meaning that the difference in the proportions could have occurred by chance fewer than five times out of 100. At each level of analysis, a calculation of the size of the difference was also made. At the grantee level, the number of instances of service below 80%, between 80% and 100%, greater than 100% to 120%, and over 120% was counted. In Appendices A and B, grantees that served less than 80% of the incidence of a particular minority category are highlighted only if the difference is also statistically significant.<sup>1</sup>

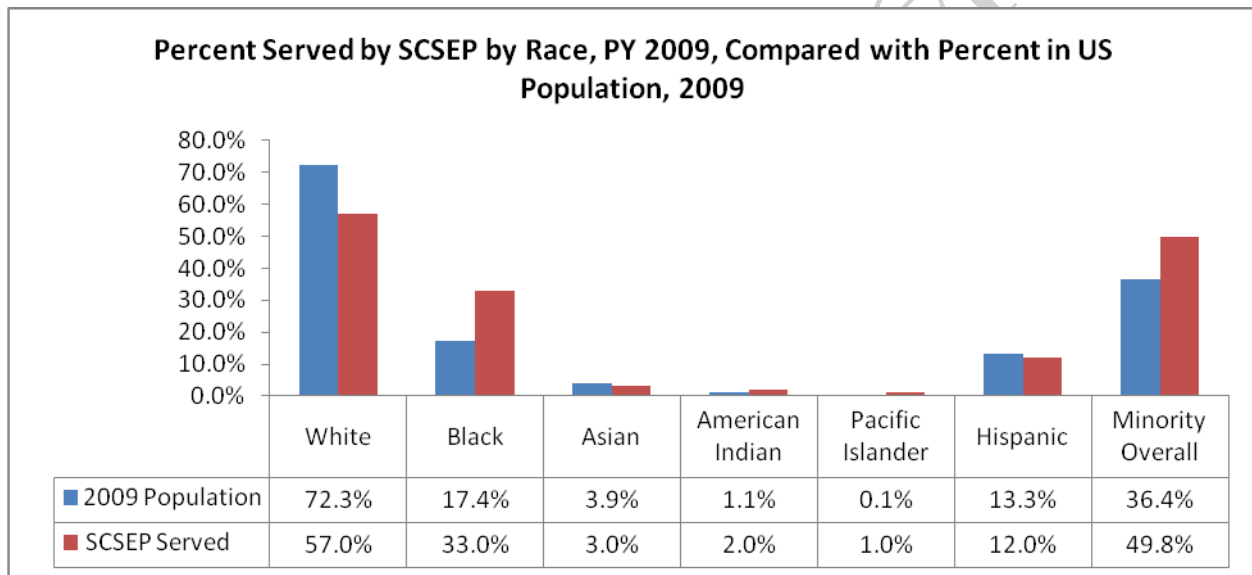

---

<sup>1</sup>The SCSEP minority percents and Census minority percents reported in the second and third columns of the tables in Appendices A and B carry more decimal places than are displayed in the tables. As a result, the percent differences in the fourth column of those tables is often slightly different from the result that would be obtained by using the numbers displayed in the second and third columns without the hidden decimal places.

Throughout this report, significant under-service with regard to participation in SCSEP means that both tests have been met: the number of SCSEP participants for a minority category is less than 80% of that category's incidence in the population and the difference is statistically significant. 80% is the standard generally applied by DOL's Civil Rights Center to determine if program practices have an adverse impact on minority groups. It is also the standard employed by DOL to assess whether programs such as SCSEP and WIA have substantially met their performance goals. Although instances of significant over-service to minorities with respect to participation is noted in Volume I, over-service is not highlighted or otherwise noted in the tables in the appendices in Volume II.

## Nationwide Results

Chart 1<sup>2</sup>

As seen in Chart 1, nationwide, the SCSEP program serves a much higher percentage of minorities overall than their representation in the population. Of the five individual minority sub-categories, the nationwide program also serves a higher percentage of Blacks, American Indians and Pacific Islanders. Asians and Hispanics were under-served. The differences noted in Chart 1 are all statistically significant at the .05 level. In 2008, Asians were not under-served at less than 80% of their incidence in the population while Hispanics were under-served at less than 80% of their incidence in the population. In 2009, both groups are now underserved at 80% of their incidence in the population. Otherwise, the results are generally consistent with those from PY 2008.

<sup>2</sup> The data in Chart 1 reflect nationwide Census data for the incidence of minorities in the population and nationwide SCSEP enrollment data from the QPR. None of the data were re-calculated for this chart.

Chart 2

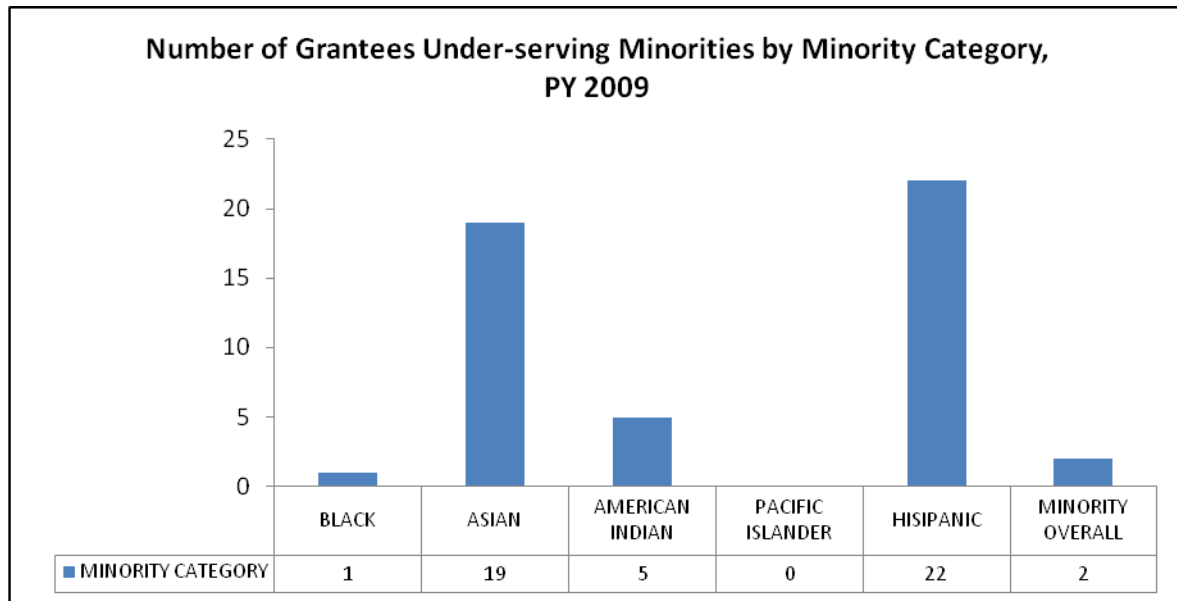

Chart 2 shows the number of grantees that served less than 80% of a minority category where the difference was also significant at the .05 level. The number of grantees under-serving Asians decreased from 26 to 19, while the number of grantees under-serving Hispanics increased from 19 to 22.

### Analysis by Minority Category

The charts below present the number and percent of grantees that serve less than 80% of the proportion of a minority category in the population, as well as those serving 80% to 100%, greater than 100% to 120%, and greater than 120% of the proportion of that minority category in the population. The analysis for minorities overall and for each minority category includes all grantees, as well as state and national grantees in the aggregate.

Chart 3

Only EW and Alaska under-served minorities overall. Five grantees serve minorities at 80-100% of their incidence in the population while 52 grantees serve minorities at over 120% of their incidence in the population. These results are consistent with the results for PY 2008.

Chart 4<sup>3</sup>

<sup>3</sup> In all of the following comparisons involving participation of minority groups by national grantees as a group, population percentages are averages of the population estimates of the states in which the national grantees operate, weighted by the proportion of active participants in each of those states. Thus, they will typically differ from the population estimate for the state grantees as a group, for which the nationwide population rate is used.

Both state and national grantees as groups over-serve minorities overall. These differences are significant at the .05 level. The difference in over-service between national and state grantees is also significant. The degree of over-service by national grantees is less than in 2008 due to the increase in the Census population estimate for minorities overall in the states served by national grantees. State grantees' level of over-service increased due to a decrease in the nationwide Census population estimate for minorities overall.

Chart 5

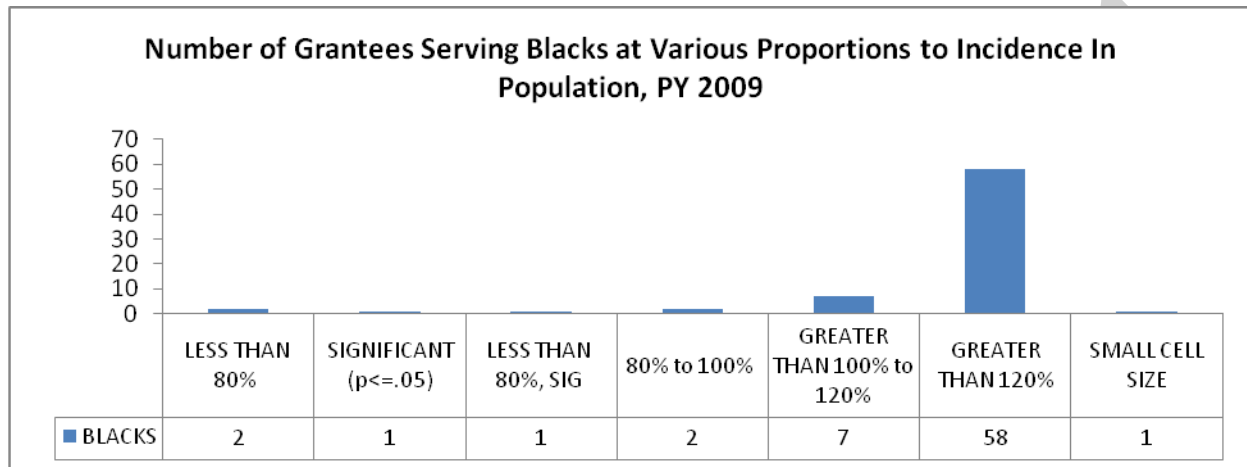

Twenty-two grantees significantly under-serve Hispanics (less than 80% of the incidence of Hispanics in the population and statistically significant at the .05 level): EW, ABLE, NAPCA, NCOA, NCBA, NICOA, NUL, SSA, The Workplace, Arizona, Arkansas, Connecticut, Delaware, Georgia, Indiana, Maryland, Massachusetts, New York, Pennsylvania, South Carolina, Tennessee, and Virginia. The number of grantees under-serving Hispanics increased slightly from PY 2008 (from 19 to 22). Fifteen grantees served more than 120% of the proportion of Hispanics in the population.

Chart 6

Both state and national grantees under-serve Hispanics; these differences are significant at the .05 level. The difference in under-service between national and state grantees is also significant. The magnitude of under-service for PY 2009 has decreased for state grantees due to the decrease in the Census population estimate for Hispanics. This decrease may be caused by an increase in the percentage of individuals reporting “Other Race” or “Two or More Races” on the ACS.

Chart 7

Only one grantee (NAPCA) under-served Blacks (less than 80% of the proportion of Blacks in the population with significance at the .05 level). Fifty-eight grantees serve 120% or more of the proportion of Blacks in the population. This is consistent with PY 2008 results.

Chart 8

Both state and national grantees over-serve Blacks. These differences are significant at the .05 level. The difference in over-service between national and state grantees is also significant. The results are consistent with the results for PY 2008.

Chart 9

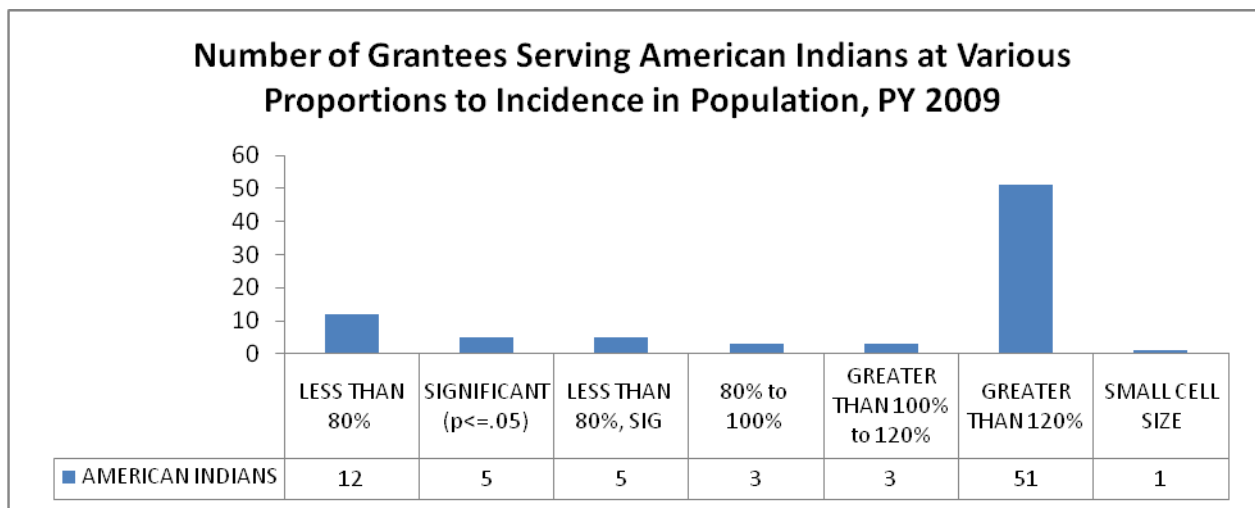

A large number of grantees, 47, serve less than 80% of the proportion of Asians in the population. However, only 19 of these grantees have statistically significant differences at the .05 level: AARP, ANPPM, Easter Seals, EW, NCBA, NICOA, NUL, SER, SSA, Alaska, Illinois, Maryland, Massachusetts, Michigan, Minnesota, New Jersey, Oregon, Texas, and Virginia. This is a decrease in under-service to Asians compared to PY 2008 (26). 12 grantees served more than 120% of the proportion of Asians in the population.

Chart 10

National grantees as a group significantly under-serve Asians while state grantees as a group serve Asians in proportion to their incidence in the population. The difference between national grantees and state grantees is significant. These results are consistent with the results for PY 2008.

Chart 11

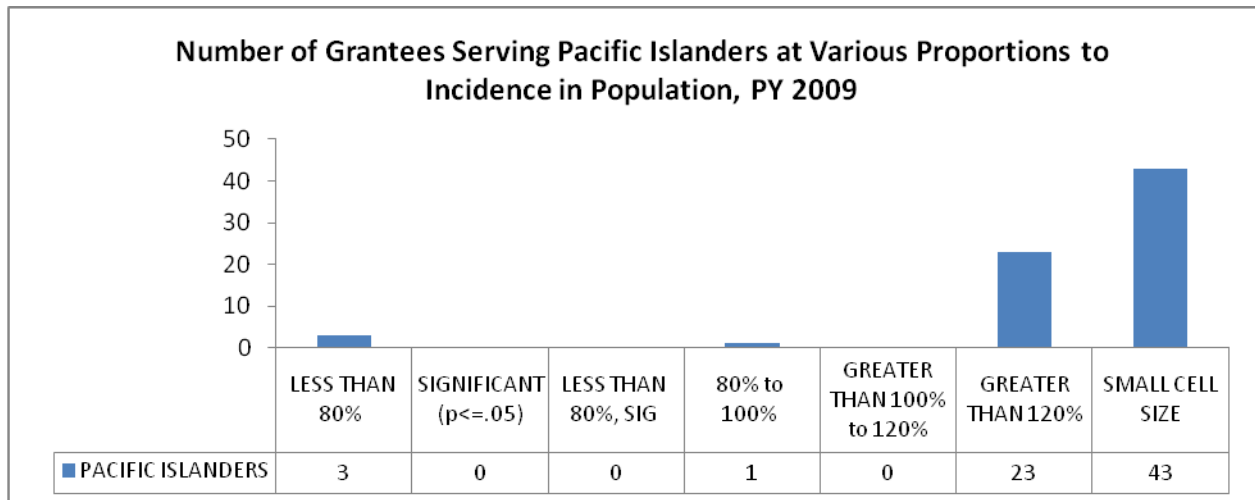

There are many grantees operating in states that have a very small number of American Indians; Census sample sizes for elderly American Indians in poverty for 2009 are very small. Five grantees served less than 80% of the proportion of American Indians in the population at the .05 level: Easter Seals, NAPCA, SSA, Alaska, and Arizona. Fifty-one served more than 120% of the proportion of American Indians in the population. The degree of over-service increased somewhat (more grantees are at 120% or more) from PY 2008. There was one zero population estimate for American Indians in the Census data this year, compared with 21 in PY 2008.

Chart 12

As groups, both the national grantees and state grantees substantially over-serve American Indians; these differences are significant at the .05 level. The difference between national grantees and state grantees is also significant, consistent with the PY 2008 results.

Chart 13

There are many grantees operating in states that have a very small number of Pacific Islanders; Census sample sizes for elderly Pacific Islanders in poverty for 2009 are very small. No grantees served less than 80% of the proportion of Pacific Islanders in the population at the .05 level (compared with four in 2008). Twenty-three grantees, or 40% of the total, served more than 120% of the proportion of Pacific Islanders in the population. The over-service of Pacific Islanders is fairly consistent with the results for PY 2008. There were 43 zero population estimates for Pacific Islanders in the Census data this year, compared with 23 in PY 2008.

Chart 14

Both national and state grantees over-serve Pacific Islanders. However, these differences are not significant, nor is the difference between the national grantees and state grantees. This is a slight change from PY 2008, when National grantees slightly over-served this group and state grantees under-served them slightly. In PY 08, the differences were significant.

## National Grantees by State Analysis

Chart 15

Chart 15 shows the number of instances and percent of under-service by national grantees in individual states, by minority category. Out of a possible 876 instances of service (146 for each minority category), there were 146 instances, or 16.7%, where under-service occurred. This is a substantial decrease from PY 2008 (23.4%). Under-service occurred most often in the Hispanic and Asian categories. There was some change from PY 2008 in the percent of total possible instances by racial category, with the percentage increasing for Hispanics and decreasing for Blacks, Asians, American Indians, and Pacific Islanders.

Table 1

	Black	Hispanic	Asian	Native American	Pacific Islander	Minority Overall	Total Instances of Under-service	Total Possible Instances	Percent of Possible Instances
AARP	0	6	12	1	1	0	20	138	14.5%
ANPPM	1	0	1	1	0	0	3	30	10.0%
Easter Seals	0	0	2	0	0	0	2	42	4.8%
EW	8	15	14	1	0	11	49	186	26.3%
GII	0	3	1	1	0	0	5	36	13.9%
IID	0	0	0	0	0	0	0	18	0.0%
Mature Services	0	0	0	0	0	0	0	6	0.0%
ABLE	0	0	0	0	0	0	0	18	0.0%
NAPCA	4	7	0	0	0	0	11	42	26.2%
NCBA	0	4	2	0	0	0	6	54	11.1%
NCOA	1	6	2	1	0	1	11	66	16.7%
NICOA	1	3	1	0	0	0	5	42	11.9%
NUL	0	3	2	0	0	0	5	36	13.9%
QCS	0	0	0	0	0	0	0	6	0.0%
SER	1	1	6	0	0	0	8	48	16.7%
SSAI	3	9	5	0	0	3	20	96	20.8%
VATD	0	0	0	0	0	0	0	6	0.0%
TWP	0	1	0	0	0	0	1	6	16.7%
Totals	19	58	48	5	1	15	146	876	16.7%

Table 1 shows the instances of under-service (less than 80% and statistically significant) by national grantee, by minority category, and provides the percentage of possible instances for each national grantee. Only three national grantees, EW, NAPCA, and SSAI under-serve in 20% or more of the possible instances. This is a substantial improvement from PY 2008 when three grantees under-served in 30% or more of the possible instances and six grantees under-served in 20% or more.

## ***Part II: Outcomes: Common Measures Entered Employment, Employment Retention, and Average Earnings***

### **Methodology**

These analyses are based on the data that were used to construct the Final PY 2009 QPR. The objective of these analyses is to determine whether minorities experience employment outcomes comparable to those of the majority population being served in SCSEP. These analyses encompass former participants who could have experienced employment outcomes between July 1, 2009, and June 30, 2010.

The three employment outcome measures used for this analysis are entered employment, employment retention, and average earnings. These measures are part of USDOL/ETA's Common Measures and are among the SCSEP core measures implemented on July 1, 2007, to comply with the 2006 amendments to the Older Americans Act. The entered employment rate is defined as the percentage of exiters employed in the quarter after the exit quarter. It is calculated by counting as employed any exiter with employment earnings during that quarter. The retention measure is defined as the percentage of those employed in the quarter after the exit quarter who have earnings in both the second and third quarters after the quarter of exit. The average earning measure is calculated only for those employed in the first quarter after the quarter of exit and who have wages in both the second and third quarters after exiting. Average earnings are presented as the amount of wages earned in the second and third quarters for all qualifying exiters divided by the number of qualifying exiters.

For the race analyses, the outcomes for each racial minority (Black, Asian, American Indian, and Pacific Islander) are compared with the outcomes for Whites. For ethnicity, Hispanics are compared to those who are not Hispanic. In addition, all who are in any minority racial or ethnic group are compared in the aggregate to those who are not in any racial or ethnic minority. The rates of entered employment and employment retention are tested using Fisher's Exact test to determine whether the difference in outcome might have occurred by chance. If the test shows that the difference could have occurred by chance fewer than 5 times in 100<sup>4</sup>, the difference is considered statistically significant. Potential differences in average earnings are tested using a t-test with an adjustment for multiple comparisons (Bonferroni). All test results are provided in the appendices located in Volume II.

The report only notes differences where a minority group is disadvantaged. In cases where the majority group is the one with a lower employment outcome rate, the test results are not noted in Volume I or highlighted in the tables in Volume II. The only exception to this approach is for the reporting of the aggregate results for Hispanics nationwide and by national and state grantees in Volume I. In those cases, the report notes where Hispanics have significantly more positive results than non-Hispanics in regard to any of the employment outcomes.

---

<sup>4</sup> A chance of less than 5 in 100 is the traditional standard used in most social science research.

There are several special features of the way data are displayed in the tables in Volume II. Where there are small numbers of minority individuals in an analysis, the observed difference in percentages for a particular outcome may look substantive but may nonetheless have occurred by chance; those cells in the table will be marked appropriately as not having a statistically significant difference. Where numbers are too small to permit analysis, the cells in the tables are also marked. If there are no data for a particular analysis for a grantee or for a national grantee in the state within which it operates, the row is eliminated rather than leaving all zeros in that row. In some instances there are slight discrepancies between the reported outcomes (a fraction of a percent or, for average earnings, a few dollars) for national or state grantees in Volume I and the data in the tables for those groups in Volume II. A complete explanation of these discrepancies and of the significance testing is presented before Appendix C in Volume II.

### Entered Employment<sup>5</sup>

The first chart presents the entered employment rates for each racial and ethnic category for all grantees nationwide. Whites are presented in the first bar as the comparison group for determining disparate outcomes for the minority groups arrayed to the right. The last two bars compare Hispanics to all of those who are not Hispanic. The next three charts present the data by race, ethnicity and minority status, nationwide and by state and national grantees.

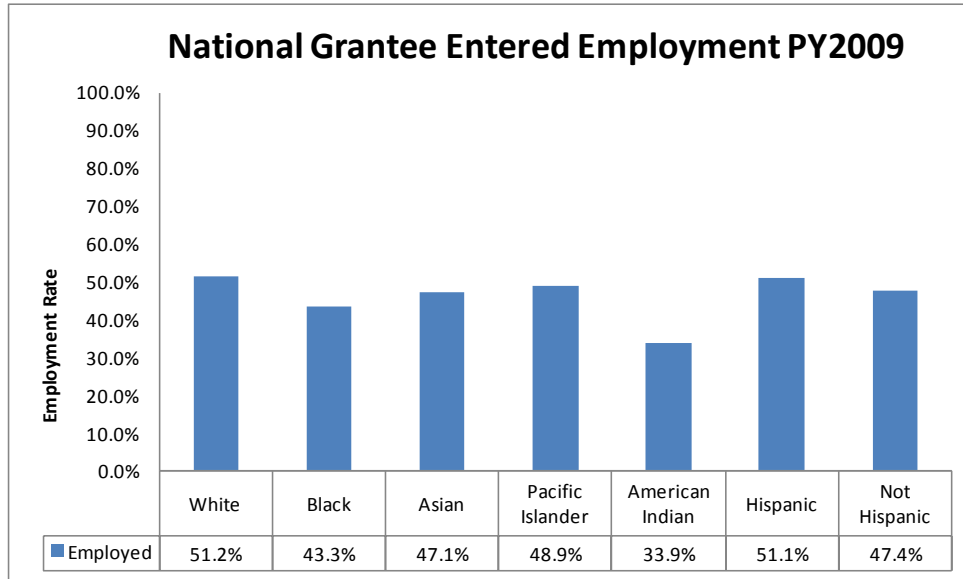

Chart 1: Entered Employment Nationwide by Race and Ethnicity

- Whites entered employment significantly more often than all other racial groups
- Hispanics entered employment significantly more often than non-Hispanics

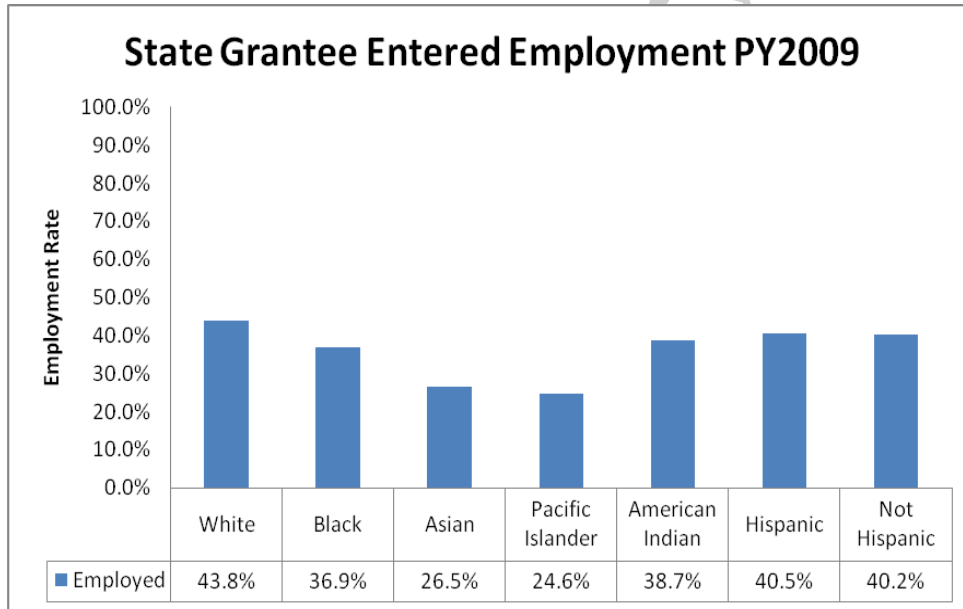

<sup>5</sup> In the analyses of employment outcomes, differences between groups are only reported when there is a statistically significant difference in the percentages based on a standard test (Fisher's Z)

Chart 2: Entered Employment for National Grantees by Race and Ethnicity

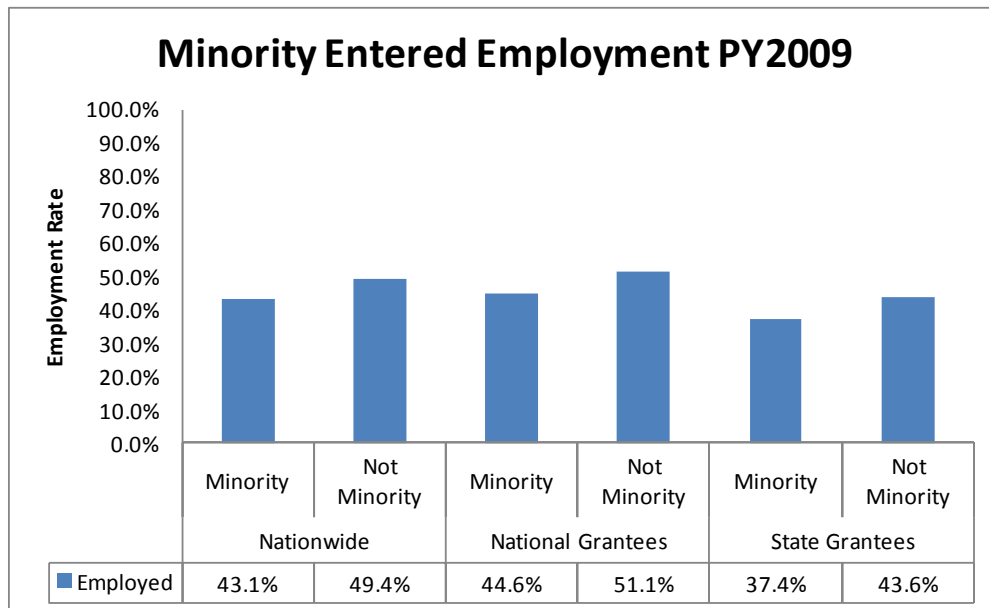

- Whites entered employment significantly more often than Blacks and American Indians
- Hispanics entered employment significantly more often than non-Hispanics

Chart 3: Entered Employment for State Grantees by Race and Ethnicity

- Whites entered employment significantly more often than Blacks, Asians and Pacific Islanders
- Hispanics entered employment at the same rate as non-Hispanics

Chart 4: Entered Employment Rate for All Grantee Groups, Minority Analysis

- *Minorities entered employment significantly less often than non-minorities nationwide and among national and state grantees*

#### Individual Grantees

The following individual grantees have minorities experiencing a disadvantage compared to non-minorities in regard to entered employment:

- AARP: Blacks and Asians entered employment significantly less often than Whites, and minorities entered employment significantly less often than non-minorities
- Experience Works: American Indians entered employment significantly less often than Whites
- NCBA: Blacks entered employment significantly less often than Whites, and minorities entered employment significantly less often than non-minorities
- SER: Blacks entered employment significantly less often than Whites
- SSAI: Minorities entered employment significantly less often than non-minorities
- Alaska: American Indians entered employment significantly less often than Whites, and minorities entered employment significantly less often than non-minorities
- Florida: Blacks entered employment significantly less often than Whites
- Illinois: Minorities entered employment significantly less often than non-minorities
- Missouri: Blacks entered employment significantly less often than Whites, and minorities entered employment significantly less often than non-minorities

#### National Grantees by State

The analyses above were conducted at the nationwide level, for each grantee, and for all state grantees and all national grantees. The same analyses were also used to determine if there were disparities in outcomes for minority participants within each national grantee in each of the

individual states in which the national grantee operated. Only disparities that disadvantaged a minority group are reported.

Table 1 Disparities in Entered Employment for National Grantees by State, Racial Categories, Ethnicity, and Minority Overall

<b>Grantee/State</b>	<b>Race and Ethnicity<sup>6</sup></b>	<b>Minority Overall<sup>7</sup></b>
<b>AARP/California</b>	---	X
<b>AARP/Florida</b>	---	X
<b>AARP/Ohio</b>	---	X
<b>AARP/Pennsylvania</b>	Hispanic	---
<b>AARP/Washington</b>	---	X
<b>ANPPM/Louisiana</b>	Black	X
<b>Experience Works/Florida</b>	Black	---
<b>Experience Works/Georgia</b>	Black	---
<b>Experience Works/IL</b>	---	X
<b>Experience Works/Montana</b>	American Indian	X
<b>Experience Works/Nebraska</b>	---	X
<b>Experience Works/North Dakota</b>	American Indian	X
<b>IID/Louisiana</b>	Black	X
<b>SSAI/Illinois</b>	---	X
<b>SSAI/Minnesota</b>	Black	X
<b>SSAI/North Carolina</b>	Black	X
<b>SSAI/Pennsylvania</b>	Black	X

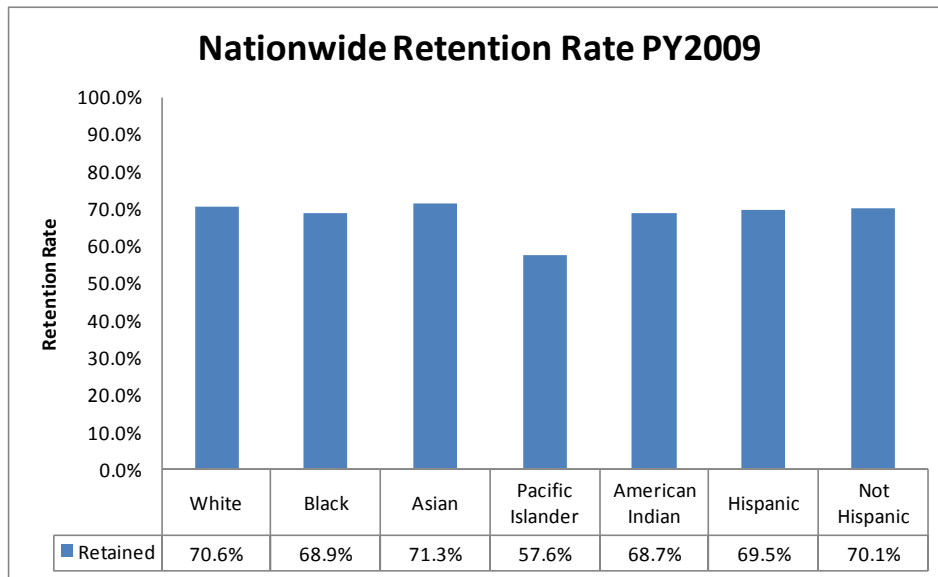

<sup>6</sup> Minority race categories are compared to Whites, and Hispanics are compared to those who are not Hispanic.

<sup>7</sup> All minority race and ethnic categories are compared to Whites who are not Hispanic.

## Employment Retention<sup>8</sup>

Chart 5 presents the employment retention rates for all grantees nationwide. Charts 6 and 7 present employment retention rates for national and state grantees. Whites are presented in the first bar as the comparison group for determining disparate outcomes for the minority groups arrayed to the right. The last two bars show the comparison between Hispanics and those not Hispanic.

Chart 5: Employment Retention Nationwide by Race and Ethnicity

- *There are no significant differences between Whites and other races*
- *There are no significant differences between Hispanics and non-Hispanics*

<sup>8</sup> In the analyses of employment outcomes, differences between groups are only reported when there is a statistically significant difference in the percentages based on a standard test (Fisher's Z)

Chart 6: Employment Retention for National Grantees by Race and Ethnicity

- *There are no significant differences between Whites and other races*
- *There are no significant differences between Hispanics and non-Hispanics*

Chart 7: Employment Retention for State Grantees by Race and Ethnicity

- *There are no significant differences in retention rates between Whites and other races*
- *Hispanics retained employment significantly more often than non-Hispanics*

The analysis in Chart 8 is broader in nature, comparing all minorities to non-minorities.

Chart 8: Employment Retention for All Grantee Groups Minority Analysis

- *Minorities retained employment significantly less often than non-minorities for national grantees only*

### Individual Grantees

The following individual grantees have minorities experiencing a disadvantage compared to non-minorities in regard to employment retention:

- IID: Blacks were significantly less likely to retain employment than Whites
- Illinois: Blacks were significantly less likely to retain employment than Whites
- Michigan: Blacks were significantly less likely to retain employment than Whites, and minorities were significantly less likely to retain employment than non-minorities

### National Grantees by State

The analyses of employment retention provided above were conducted at the nationwide level, for each grantee, and for all state grantees and all national grantees. The same analyses were also used to determine if there were disparities in outcomes for minority participants within each national grantee in each of the individual states in which the national grantee operated. Only disparities that disadvantaged a minority group are reported. The results are reported below.

Table 2 Disparities in Employment Retention for National Grantees by State, Racial Categories, Ethnicity, and Minority Overall

<b>Grantee/State</b>	<b>Race and Ethnicity<sup>9</sup></b>	<b>Minority Overall<sup>10</sup></b>
<b>AARP/Arizona</b>	Black	X
<b>AARP/New York</b>	Hispanic	---
<b>AARP/Pennsylvania</b>	Hispanic	---
<b>Experience Works/New York</b>	Black	X
<b>Experience Works/Ohio</b>	Black	X
<b>Experience Works/South Dakota</b>	Black	X
<b>Goodwill/Pennsylvania</b>	Black	---
<b>NCOA/California</b>	Black	---
<b>NCOA/Louisiana</b>	Black	---
<b>SER/California</b>	---	X
<b>SSAI/Texas</b>	---	X

<sup>9</sup> Minority race categories are compared to Whites, and Hispanics are compared to those who are not Hispanic.

<sup>10</sup> All minority race and ethnic categories are compared to Whites who are not Hispanic.

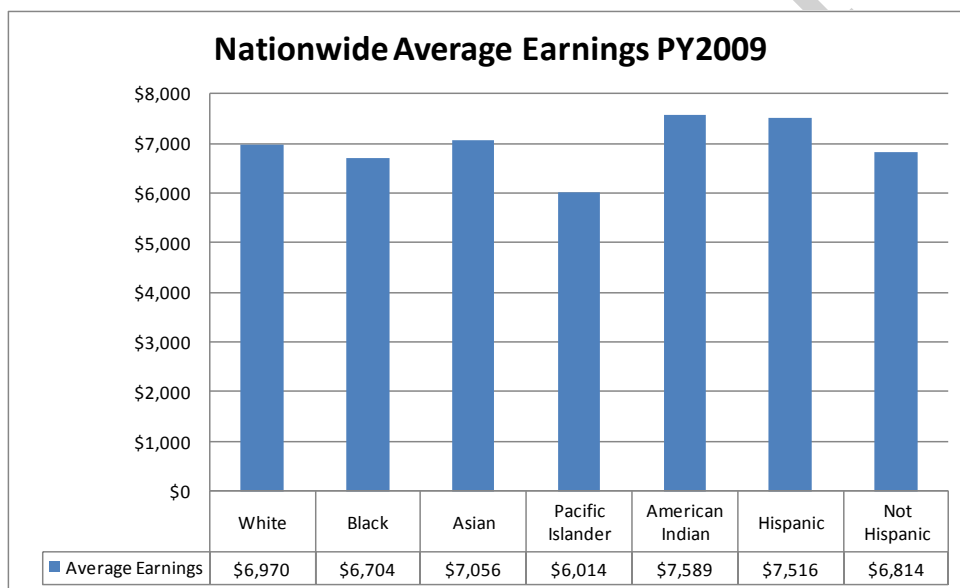

## Average Earnings<sup>11</sup>

Earnings for SCSEP participants are reported only when the individual participants have employment after exiting (wages in the first quarter after exit) and have wages in both the second and third quarters after exiting. The wages are calculated for the two quarters so the numbers in the charts below represent the average wages for six months for those participants who entered and retained employment.

Chart 9 presents the average earnings for all grantees nationwide. Charts 10 and 11 present average earnings for national and state grantees. Whites are presented in the first bar as the comparison group for determining disparate outcomes for the minority groups arrayed to the right. The last two bars show the comparison between Hispanics and those not Hispanic. Only disparities that disadvantaged a minority group are reported.

Chart 9: Average Earnings Nationwide by Race and Ethnicity

- *There are no significant differences in average earnings between Whites and other races*
- *Hispanics have significantly higher average earnings than non-Hispanics*

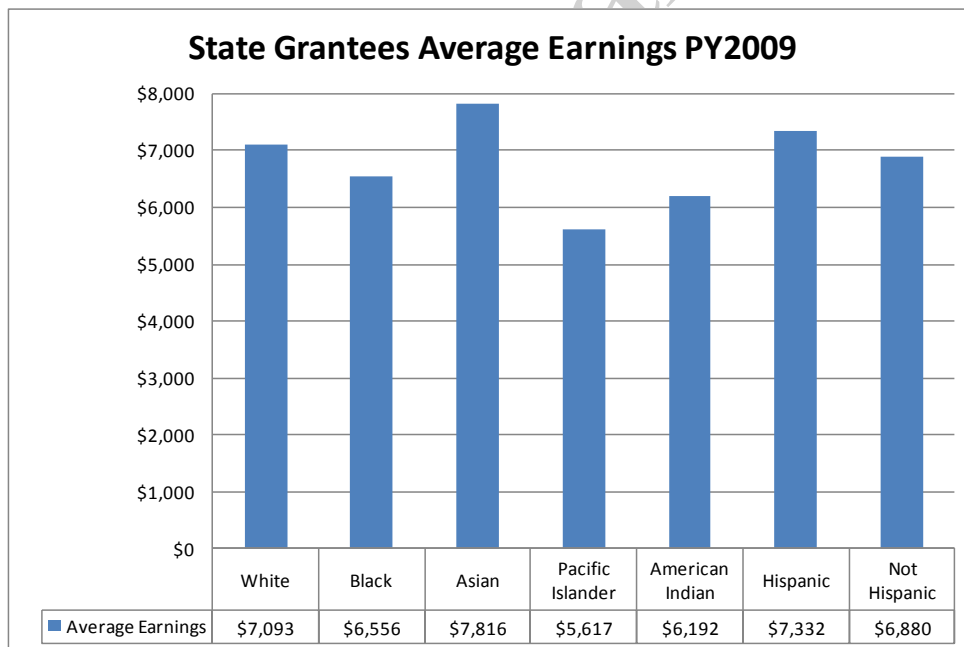

<sup>11</sup> In the following analyses, differences between group average earnings are only reported when there is a statistically significant difference in the mean based on a standard test (t-test, Bonferroni adjustment for multiple comparisons).

Chart 10: Average Earnings National Grantees by Race and Ethnicity

- *There are no significant differences in average earnings between Whites and other races*
- *Hispanics have significantly higher average earnings than non-Hispanics*

Chart 11: Average Earnings State Grantees by Race and Ethnicity

- *There are no significant differences in average earnings between Whites and other races*
- *There is no significant difference between Hispanics and non-Hispanics*

Chart 12: Average Earnings Minority Analysis

- *There are no significant differences in average earnings between minorities and non-minorities for any groups of grantees*

### Individual Grantees

The following individual grantees have minorities experiencing a disadvantage compared to non-minorities in regard to average earnings:

- AARP: Whites earned significantly more on average than Blacks
- Delaware: Whites earned significantly more on average than Blacks, and non-minorities earned significantly more on average than minorities
- Florida: Whites earned significantly more on average than Blacks, non-minorities earned significantly more on average than minorities
- Texas: Non-minorities earned significantly more on average than Minorities

### National Grantees by State

The analyses of average earnings provided above were conducted at the nationwide level, for each grantee, and for all state grantees and all national grantees. The same analyses were also used to determine if there were disparities in outcomes for minority participants within each national grantee in each of the individual states in which the national grantee operated. The results are reported below.

Table 3 Disparities in Average Earnings for National Grantees by State, Racial Categories, Ethnicity, and Minority Overall

<b>Grantee/State</b>	<b>Race and Ethnicity<sup>12</sup></b>	<b>Minority Overall<sup>13</sup></b>
<b>AARP/California</b>	Hispanic	---
<b>AARP/South Carolina</b>	Black	X
<b>AARP/Texas</b>	Hispanic	X
<b>NCBA/Florida</b>	Black	X
<b>NCOA/California</b>	Asian	X
<b>SSAI/Minnesota</b>	Black	X

<sup>12</sup> Minority race categories are compared to Whites, and Hispanics are compared to those who are not Hispanic.

<sup>13</sup> All minority race and ethnic categories are compared to Whites who are not Hispanic.
